

Project I - CSLHM

Part I

Read the article “Inside America’s Education Revolution” (embedded in this assignment) and analyze it using the Critical Statistical Literacy Habits of Mind framework that we discussed in class. Here are some helpful guiding questions:

- **Examine the Statistics:** The article mentions that two-thirds of fourth and eighth graders are not proficient in reading. What questions should you ask about how this statistic was gathered? Consider who conducted the study, the sample size, and whether any important variables were left out.
- **Data Interpretation:** The article states that absenteeism nearly doubled between 2019 and 2023. How might the way absenteeism is measured (or the reasons for it) affect the interpretation of this statistic? Could the pandemic or other societal factors have influenced this trend?
- **Consider the source and evaluate the author’s lens.**
- **Compare different perspectives:** Opponents of school choice argue that such legislation takes resources away from public schools. How might the statistics presented in the article look different if they were presented by a teachers' union or a different advocacy group with a different agenda?
- **Question the Solutions:** The article suggests that microschools are a viable solution to the problems in public education. What statistical evidence should be examined to assess whether microschools are more effective than traditional public schools? What are potential biases in the data presented?
- **Impact of External Factors:** The article mentions a significant drop in math scores between 2018 and 2023. How might external factors such as the COVID-19 pandemic have affected this data, and what additional statistics could provide a more comprehensive understanding of this trend?

Write a 400-600 word paper analyzing this article.

Part II

Now that you're familiar with the CSLHM framework, find three (or more, for extra credit if you're highly motivated) data representations (graphs, tweets, etc.) where you applied at least one habit of mind to analyze them (it’s possible to apply several at once).

Submit all 3 screenshots with breakdown of how you enacted CSLHM.

Part III

Lastly, pick one news article or podcast episode from the [Interactive Media Bias Chart](#), and use the CSLHM framework to analyze it. Submit a 300-400 word analysis of your chosen article or episode. Note: On the left side of the page, you can filter by Website/Articles or Podcast/Audio for a clearer view of options.
